

MOBILEVISION... SIMPLY UNFORGETTABLE

MobileVision

WHERE BIG THINGS HAPPEN

MobileVision's success is the result of expensive research, exclusive optical technology, mobility, and cutting edge tour technology. The Screen and Projection System are portable and can be quickly set up. They can be adjusted to fit venues where there is not enough unobstructed height for the full expansion of the image.

The MobileVision image is processed and digitized, allowing for maximum clarity and depth. This technology allows any existing footage or new footage to be used either alone or in combination with real-time simulcasting.

The resulting performance mirrors that of a live concert experience - only better, because you can see everything that happens up close and very clearly on MobileVision's giant screen. MobileVision's 100,000 watts of crystal sound uplifts the audience, allowing everybody to enjoy the feeling of a live show
